This USE & CARE MANUAL provides specific operating instructions for your model. Use the room air conditioner only as instructed in this USE & CARE MANUAL. These instructions are not meant to cover every possible condition and situation that may occur. Common sense and caution must be practiced when installing, operating, and maintaining any appliance.

The power supply cord with this air conditioner contains a current detection device designed to reduce the risk of fire. Please refer to the section ‘Operation of Current Device’ for details. In the event that the power supply cord is damaged, it cannot be repaired. It must be replaced with a cord from the product manufacturer.

Avoid fire hazard or electric shock. Do not use an extension cord or an adapter plug. Do not remove any prong from the power cord.

For Your Safety
Do not store or use gasoline or other flammable vapors and liquids in the vicinity of this or any other appliance. Read product labels for flammability and other warnings.

Prevent Accidents
To reduce the risk of fire, electrical shock, or injury to persons when using your air conditioner, follow basic precautions, including the following:

• Be sure the electrical service is adequate for the model you have chosen. This information can be found on the serial plate, which is located on the side of the cabinet and behind the grille.
• If the air conditioner is to be installed in a window, you will probably want to clean both sides of the glass first. If the window is a triple-track type with a screen panel included, remove the screen completely before installation.
• Be sure the air conditioner has been securely and correctly installed according to the separate installation instructions provided with this manual. Save this manual and the installation instructions for possible future use in removing or reinstalling this unit.
• When handling the air conditioner, be careful to avoid cuts from sharp metal fins on front and rear coils.

Electrical Information
The complete electrical rating of your new room air conditioner is stated on the serial plate. Refer to the rating when checking the electrical requirements.

• Be sure the air conditioner is properly grounded. To minimize shock and fire hazards, proper grounding is important. The power cord is equipped with a three-prong grounding plug for protection against shock hazards.
• Your air conditioner must be used in a properly grounded wall receptacle. If the wall receptacle you intend to use is not adequately grounded or protected by a time delay fuse or circuit breaker, have a qualified electrician install the proper receptacle.
• Do not run air conditioner without outside protective cover in place. This could result in mechanical damage within the air conditioner.
• Do not use an extension cord or an adapter plug.

READ THIS SECTION BEFORE ATTEMPTING TO OPERATE AIR CONDITIONER. Unit must be upright for one hour prior to operating.

Operation of Current Device
Plug in & press RESET

The power supply cord contains a current device that senses damage to the power cord. To test your power supply cord do the following:
1. Plug in the Air Conditioner.
2. The power supply cord will have TWO buttons on the plug head. Press the TEST button. You will notice a click as the RESET button pops out.
3. Press the RESET button. Again you will notice a click as the button engages.
4. The power supply cord is now supplying electricity to the unit. (On some products this is also indicated by a light on the plug head).

• Do not use this device to turn the unit on or off.
• Always make sure the RESET button is pushed in for correct operation.
• The power supply cord must be replaced if it fails to reset when either the TEST button is pushed, or it cannot be reset. A new one can be obtained from the product manufacturer.
• If power supply cord is damaged, it CANNOT be repaired. It MUST be replaced by one obtained from the product manufacturer.
Product Registration & Normal Sounds

Product Registration

Record Your Model and Serial Numbers

Record in the space provided below the model and serial numbers. On all models, the serial plate is located on the outside of the cabinet.

Model No. ____________________________
Serial No. ____________________________

Register Your Product

The self-addressed PRODUCT REGISTRATION CARD should be filled in completely, signed and returned to the Frigidaire Company.

Normal Sounds

High pitched Chatter
Today’s high efficiency compressors may have a high pitched chatter during the cooling cycle.

Sound of Rushing Air
At the front of the unit, you may hear the sound of rushing air being moved by the fan.

Vibration
Unit may vibrate and make noise because of poor wall or window construction or incorrect installation.

Gurg/e/Hiss
"Gurgling or hissing" noise may be heard due to refrigerant passing through evaporator during normal operation.

Pinging or Swishing
Droplets of water hitting condenser during normal operation may cause "pinging or swishing" sounds.
Air Conditioner Features

Before you begin, thoroughly familiarize yourself with the control panel and remote as shown below and all its functions, then follow the symbol for the functions you desire. The unit can be controlled by the touch pad alone or with the remote.

Operating Instructions

**NOTE**

The following instructions represent the Touch Pad, the same instructions can be used for the Remote Control.

**TO TURN UNIT ON:**

**YOU WILL SEE:**

**DO THIS:**

PRESS ON/OFF BUTTON

Battery Size: AAA

Warning: Do not mix old and new batteries. Do not mix alkaline, standard (carbon-zinc), or rechargeable (nickel-cadmium) batteries.
Operating Instructions (continued)

TO CHANGE TEMPERATURE SETTING:

DO THIS:
PRESS TO RAISE
PRESS TO LOWER

YOU WILL SEE:

Note: Tap or hold either up (▲) or down (▼) button until the desired temperature is seen on the display. This temperature will be automatically maintained anywhere between 60 °F (16 °C) and 90 °F (32 °C). If you want the display to read the actual room temperature. See "To Operate on Fan Only" section on Page 6.

TO ADJUST FAN SPEEDS:

DO THIS:
PRESS TO SELECT

YOU WILL SEE:

LIGHT ON

TO USE AUTO FAN FEATURE:

DO THIS:
PRESS FAN BUTTON
CHOOSE AUTO

YOU WILL SEE:

LIGHT ON

Note: Fan starts at High Speed and adjusts to a slower speeds the room temperature dictates. For example, if the room doesn't get too warm, it will stay at the slowest speed. If the room temperature rises quickly, such as a door being opened, it will automatically go to the highest speed. The fan speeds will re-adjust back to the slowest speed as the room returns to the original set temperature. Press either the fan slower or fan faster button to adjust the fan speed manually.
Operating Instructions (continued)

TO OPERATE ON FAN ONLY:

YOU WILL SEE:

**DO THIS:**
- PRESS MODE BUTTON
- CHOOSE FAN ONLY

Note: Use this function only when cooling is not desired, such as for room air circulation or to exhaust stale air on some models. (Remember to open the vent during this function, but keep it closed during cooling for maximum cooling efficiency.) You can choose any fan speed you prefer. (Except “Auto Fan”). During this function, the display will show the actual room temperature, not the set temperature as in the cooling mode.

TO USE THE ENERGY SAVER FEATURE:

YOU WILL SEE:

**DO THIS:**
- PRESS MODE BUTTON
- CHOOSE ENERGY SAVER

Note: In this mode, the fan will continue to run for 1 minute after the compressor shuts off. The fan then cycles on for 20 seconds at 10 minute intervals until the room temperature is above the set temperature, at which time the compressor turns back on.

SLEEP FEATURE:

YOU WILL SEE:

**DO THIS:**
- PRESS SLEEP BUTTON

Note: In this mode the selected temperature will increase by 2 °F 30 minutes after the mode is selected. The temperature will then increase by another 2 °F after an additional 30 minutes. This new temperature will be maintained for 7 hours before it returns to the originally selected temperature. This ends the “Sleep” mode and the unit will continue to operate as originally programmed. The “Sleep” mode program can be cancelled at any time during operation by again pressing the “Sleep” button.
OPERATING INSTRUCTIONS

TIMER: DELAY STOP / START FEATURE

First, press TIMER button, then adjust timer setting, tap or hold the UP arrow (▲) or the DOWN arrow (▼) to change delay timer at 0.5 hour increments, up to 10 hours, then at 1 hour increments up to 24 hours. The control will count down the time remaining until start (8, 7.5, 7, etc.). The Delay Start Operation automatically selects cooling with maximum Fan speed (if Cool, Energy Saver, or Fan Only was the last mode selected). The temperature maintained will be the same as previously set. To change the set temperature, press "COOL" then Up or Down arrows until the desired temperature is indicated on the display. After 5 seconds, the control will automatically change the display back to the hours remaining until the unit will start/stop. Pressing the unit On/Off button at any time will cancel the Delay Start/Stop function. The Delay Start/Stop Feature will work until the unit either starts or stops. Once that happens the above steps have to be repeated again.

YOU WILL SEE HOW MUCH TIME IS CHOSEN:

Note: For Delay Stop, the unit must be in the On position. Note: For Delay Start, the unit must be in the Off position. Temperatures will be maintained at settings previously selected. To change the set temperature, press "COOL" then Up or Down arrows until the desired temperature is indicated on the display. After 5 seconds, the control will automatically change the display back to the hours remaining until the unit will start/stop. Pressing the unit On/Off button at any time will cancel the Delay Start/Stop function. The Delay Start/Stop Feature will work until the unit either starts or stops. Once that happens the above steps have to be repeated again.

CHECK FILTER FEATURE:

DO THIS:
PRESS CHECK FILTER BUTTON

YOU WILL SEE:

LIGHT ON

LIGHT OFF

DO THIS:
PRESS CHECK FILTER BUTTON

FAULT CODES:

If the display reads "AS", a sensor has failed. Contact your Authorized Frigidaire Service Center.

If the display reads "ES", a sensor has failed. Contact your Authorized Frigidaire Service Center.

TO TURN UNIT OFF:

YOU WILL SEE:

**DO THIS:**

PRESS ON/OFF BUTTON

**ADDITIONAL THINGS YOU SHOULD KNOW**

Now that you have mastered the operating procedure, here are more features in your control that you should become familiar with.

- The “Cool” circuit has an automatic 3 minute time delayed start if the unit is turned off and on quickly. This prevents overheating of the compressor and possible circuit breaker tripping. The fan will continue to run during this time.

- There is a 2-Second delay for the compressor shutting down when selecting FAN ONLY. This is to cover the possibility of having to roll through to select another mode.

- The control will maintain the set temperature within 2 degrees Fahrenheit, between 60°F and 90°F degrees.

- The control is capable of displaying temperature in degrees Fahrenheit or degrees Celsius. To convert from one to the other and back, press and hold the “TEMP/TIMER” Up ( ▲ ) and Down ( ▼ ) buttons together for 3 seconds.

- After a power outage, the unit will memorize the last setting and return the unit to the same setting once power is restored.

**EXHAUST CONTROL**

This Exhaust Control allows the air conditioner to either recirculate inside air (CLOSED) or exhaust air to the outside (OPEN). The CLOSED position is used when maximum cooling is desired. It may also be used for air recirculation without cooling when the air conditioner is set in any FAN position. The OPEN position removes stale air from the room and exhausts it to the outside. Fresh air is drawn in through normal passages in the home.

**4-WAY LOUVERS**

The 4-Way air directional louvers allow you to direct the air flow Up or Down and Left or Right throughout the room as needed.
Care and Cleaning

Clean your air conditioner occasionally to keep it looking new. **Be sure to unplug the unit before cleaning to prevent shock or fire hazards.**

**Air Filter Cleaning**
The air filter should be checked at least once a month to see if cleaning is necessary. Trapped particles in the filter can build up and cause an accumulation of frost on the cooling coils.

- Grasp the filter by the center and pull up and out.
- Wash the filter using liquid dishwashing detergent and warm water. Rinse filter thoroughly. Gently shake excess water from the filter. Be sure filter is thoroughly dry before replacing.
- Or instead of washing, you may vacuum the filter clean.

**Cabinet Cleaning**

- Be sure to unplug the air conditioner to prevent shock or fire hazard. The cabinet and front may be dusted with an oil-free cloth or washed with a cloth dampened in a solution of warm water and mild liquid dishwashing detergent.
- Rinse thoroughly and wipe dry.
- Never use harsh cleaners, wax or polish on the cabinet front.
- Be sure to wring excess water from the cloth before wiping around the controls. Excess water in or around the controls may cause damage to the air conditioner.
- Plug in air conditioner.

**Winter Storage**

If you plan to store the air conditioner during the winter, remove it carefully from the window according to the installation instructions. Cover it with plastic or return it to the original carton.

**NOTE:** To prevent rust or electrical connections from being damaged, store air conditioner in an upright position and a dry place.

Energy Saving Ideas

- **Do not block air flow inside with blinds, curtains or furniture; or outside with shrubs, enclosures, or other buildings.**
- The capacity of the room air conditioner must fit the room size for efficient and satisfactory operation.
- Install the room air conditioner on the shady side of your home. A window that faces north is best because it is shaded most of the day.
- Close the fireplace damper, floor and wall registers so cool air does not escape up the chimney and into the duct work.
- Keep blinds and drapes in other windows closed during the sunniest part of the day.
- Clean the air filter as recommended in the section “Care and Cleaning”.
- Proper insulation and weather stripping in your home will help keep warm air out and cool air in.
- External house shading with trees, plants or awnings will help reduce the air conditioner’s work load.
- Operate heat producing appliances such as ranges, washers, dryers and dishwashers during the coolest part of the day.
Before calling for service, review this list. It may save you time and expense. This list includes common occurrences that are not the result of defective workmanship or materials in this appliance.

<tbody>
<tr>
<td>Air conditioner will not operate.</td>
<td>Wall plug disconnected. Push plug firmly into wall outlet. Plug Current Device Tripped. Press the RESET button. House fuse blown or circuit breaker tripped. Replace fuse with time delay type or reset circuit breaker. Control is OFF. Turn Control ON and set to desired setting.</td>
</tr>
<tr>
<td>Air from unit does not feel cold enough.</td>
<td>Room temperature below 60°F (16°C). Cooling may not occur until room temperature rises above 60°F (16°C). Temperature sensing element touching cold coil, located behind air filter. Straighten away from coil. Reset to a lower temperature. Compressor shut-off by changing modes. Wait approximately 3 minutes and listen for compressor to restart when set in the COOL mode.</td>
</tr>
<tr>
<td>Air conditioner cooling, but room is too warm - ice forming on cooling coil behind decorative front.</td>
<td>Outdoor temperature below 60 °F (16 °C). To defrost the coil, set FAN ONLY mode. Air filter may be dirty. Clean filter. Refer to Care and Cleaning section. To defrost, set to FAN ONLY mode. Temperature is set too low for night-time cooling. To defrost the coil, set to FAN ONLY mode. Then, set temperature to a higher setting.</td>
</tr>
<tr>
<td>Air conditioner cooling, but room is too warm - NO ice forming on cooling coil behind decorative front.</td>
<td>Dirty air filter - air restricted. Clean air filter. Refer to Care and Cleaning section. Temperature is set too high. Set temperature to a lower setting. Air directional louvers positioned improperly. Position louvers for better air distribution. Front of unit is blocked by drapes, blinds, furniture, etc. - restricts air distribution. Clear blockage in front of unit. Doors, windows, registers, etc. open - cool air escapes. Close doors, windows, registers, etc. Unit recently turned on in hot room. Allow additional time to remove “stored heat” from walls, ceiling, floor and furniture.</td>
</tr>
<tr>
<td>Air conditioner turns on and off rapidly.</td>
<td>Dirty air filter - air restricted. Clean air filter. Outside temperature extremely hot. Set FAN speed to a faster setting to bring air through cooling coils more frequently.</td>
</tr>
<tr>
<td>Noise when unit is cooling.</td>
<td>Air movement sound. This is normal. If too loud, set to lower FAN setting. Window vibration - poor installation. Refer to installation instructions or check with installer.</td>
</tr>
<tr>
<td>Water dripping INSIDE when unit is cooling.</td>
<td>Improper installation. Tilt air conditioner slightly to the outside to allow water drainage. Refer to installation instructions or check with installer.</td>
</tr>
<tr>
<td>Water dripping OUTSIDE when unit is cooling.</td>
<td>Unit removing large quantity of moisture from humid room. This is normal during excessively humid days.</td>
</tr>
<tr>
<td>Room too cold.</td>
<td>Set temperature too low. Increase set temperature.</td>
